
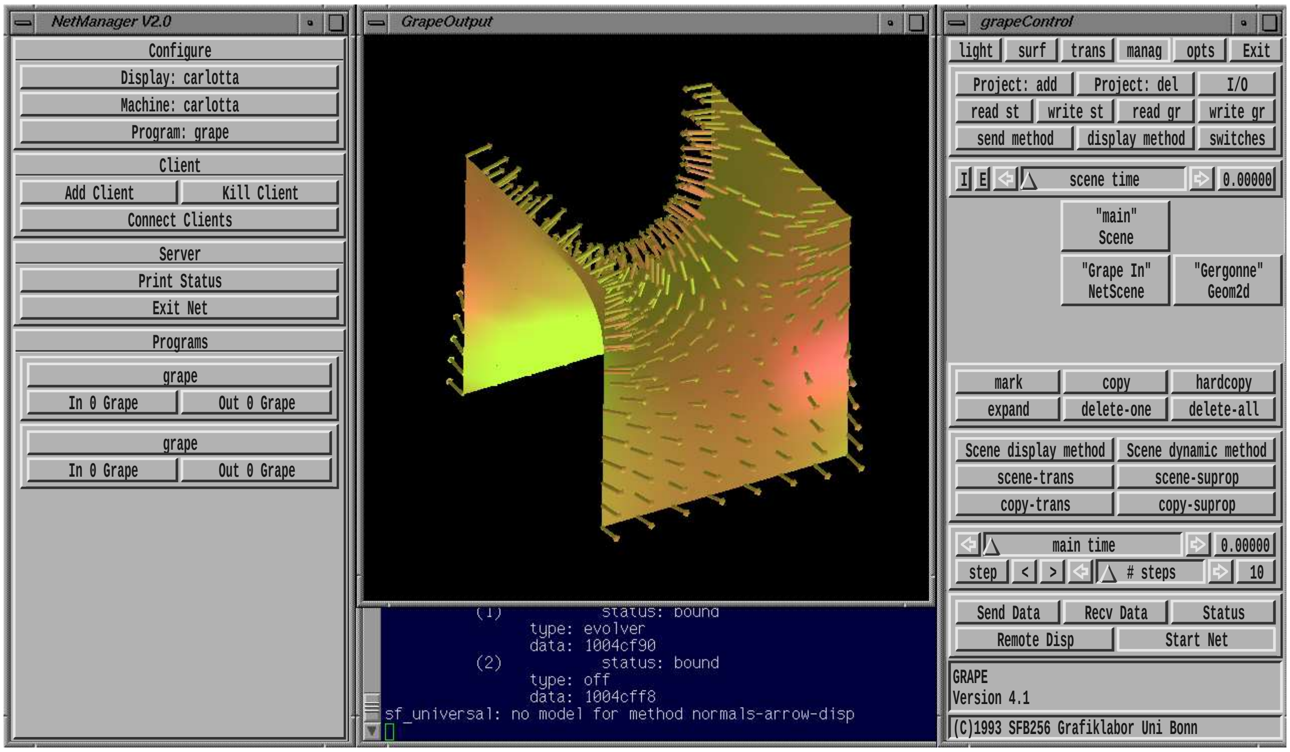

Figure 3 (B. Oberknapp, K. Polthier: A Simple Concept for Distributed Computing in Computer Graphics): Remote Objects in GRAPE. The computation process is running on an SGI Challenge, the graphical postprocessing is done on an SGI Indigo2. The same geometry is accessed in the data hierarchies of both GRAPE processes.

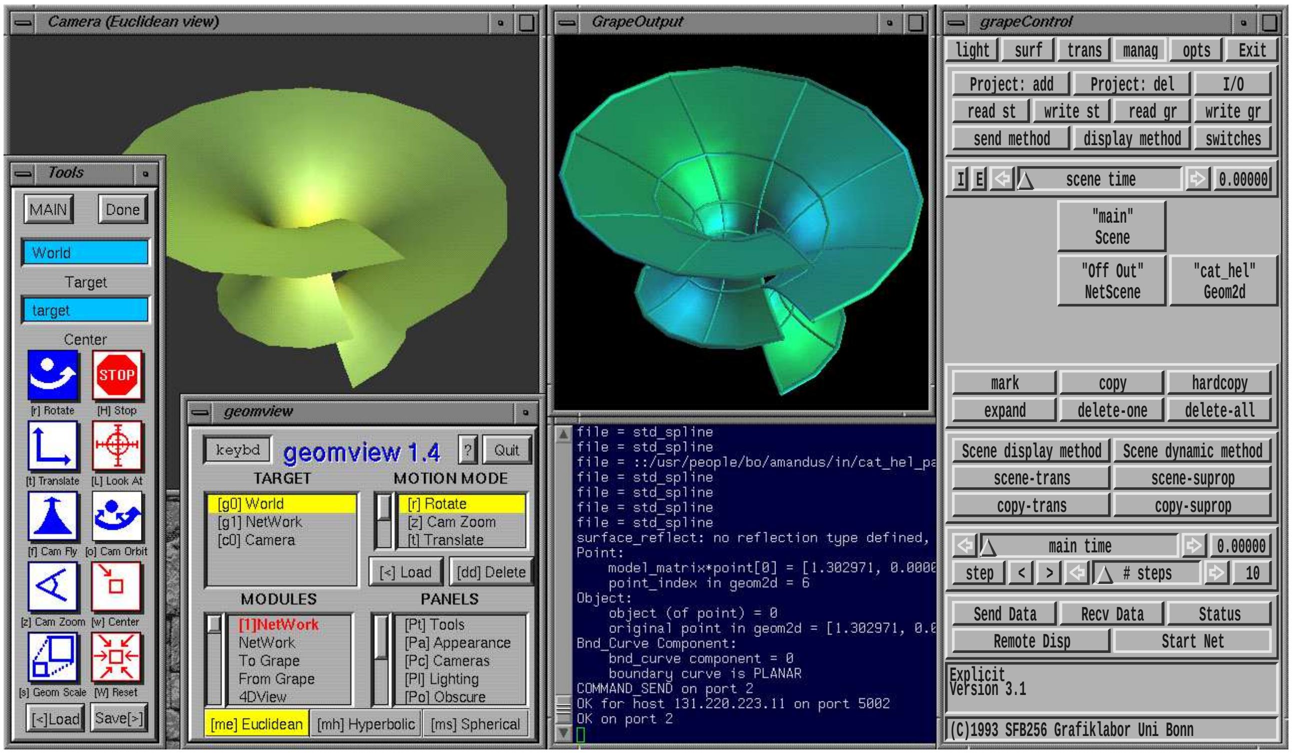

Figure 6 (B. Oberknapp, K. Polthier: A Simple Concept for Distributed Computing in Computer Graphics): Geomview and GRAPE. An external Geomview module was used for connecting Geomview to the net-manager.
